

AEM-TASK 5

Author component update:

The screenshot shows the AEM interface with the file `author.html` open. The code defines two components: `cmp-helloworld_item` for author details and `cmp-helloworld_item-label` for the author's bio. The `cmp-helloworld_item` component uses the `data-sly-test` attribute to conditionally render the author's bio and books. The `cmp-helloworld_item-label` component uses the `data-sly-list` attribute to render a list of books.

Name	Type	Value	Protected	Mandatory	Multiple	Auto Created
1	composite	Boolean[]	false	false	true	false
2	fieldLabel	String	false	false	false	false
3	jr:primaryType	Name	true	true	false	true
4	name	String	false	false	false	false
5	sling:resourceType	String	false	false	false	false

The screenshot shows the AEM interface with the Assets panel on the left and the Properties dialog for the 'Author' component on the right. The Assets panel shows a list of assets, including 'logo.jpeg' and 'asset.jpg'. The Properties dialog shows fields for Author Name, Author Bio, DOB, and Author Books.

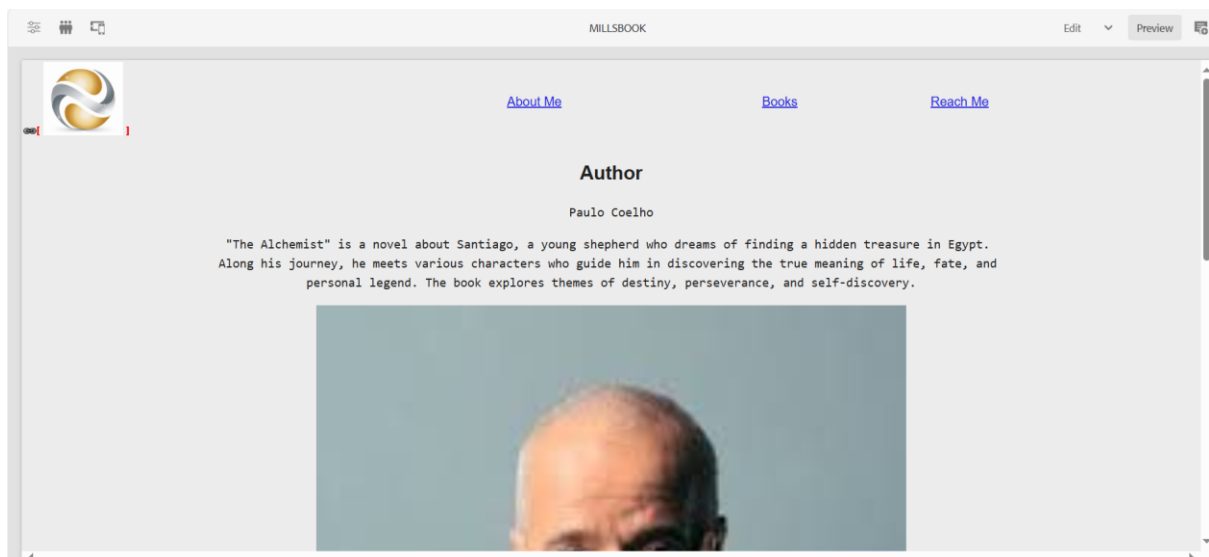

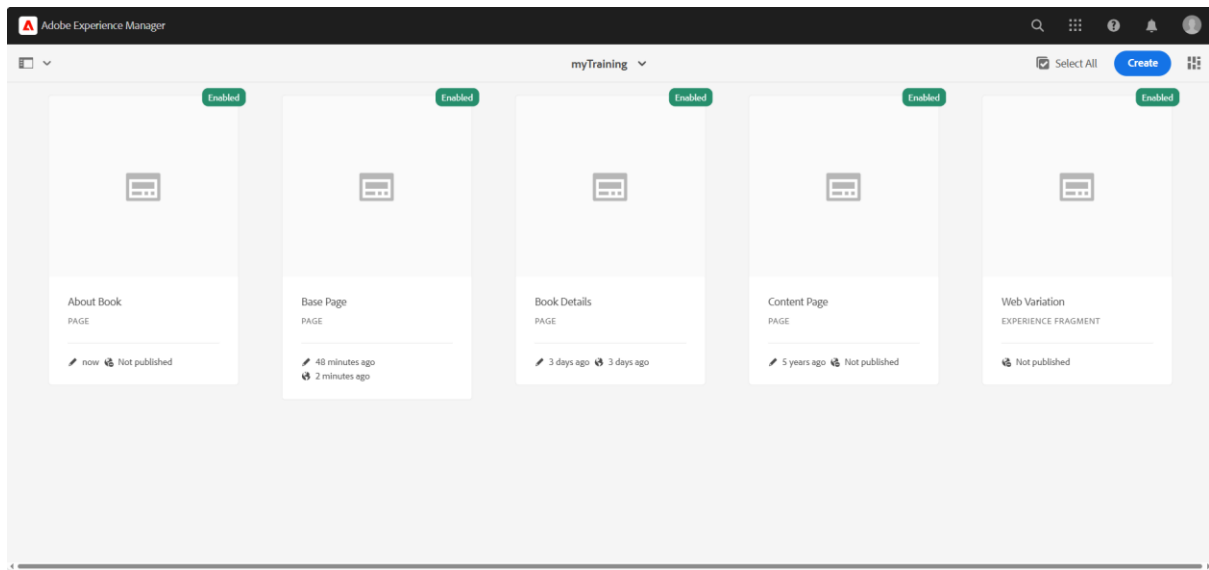

Assets:

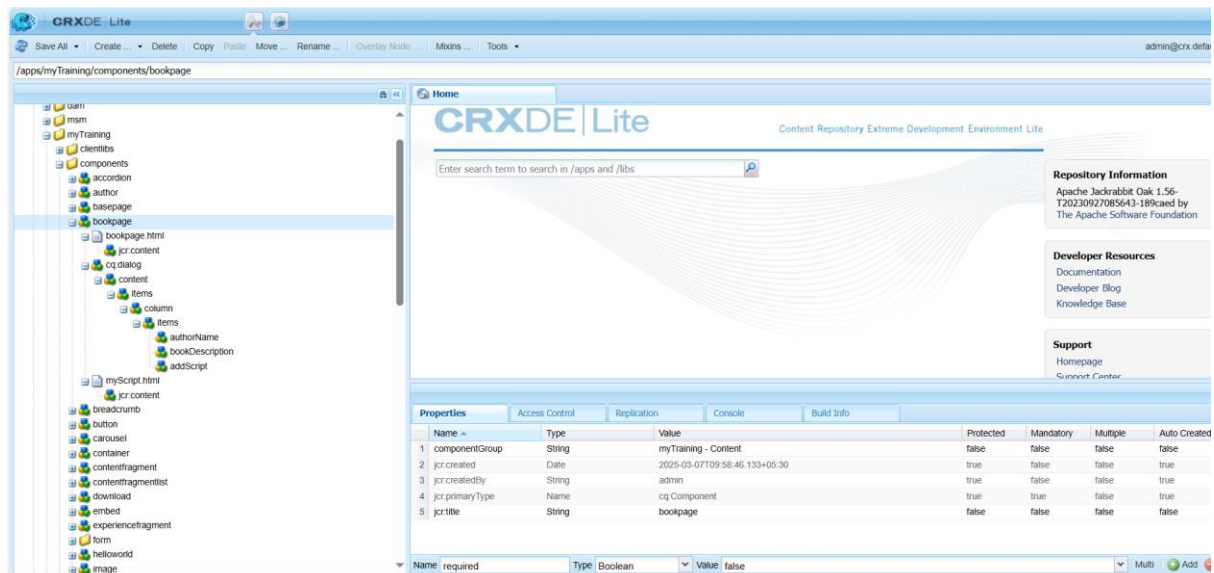

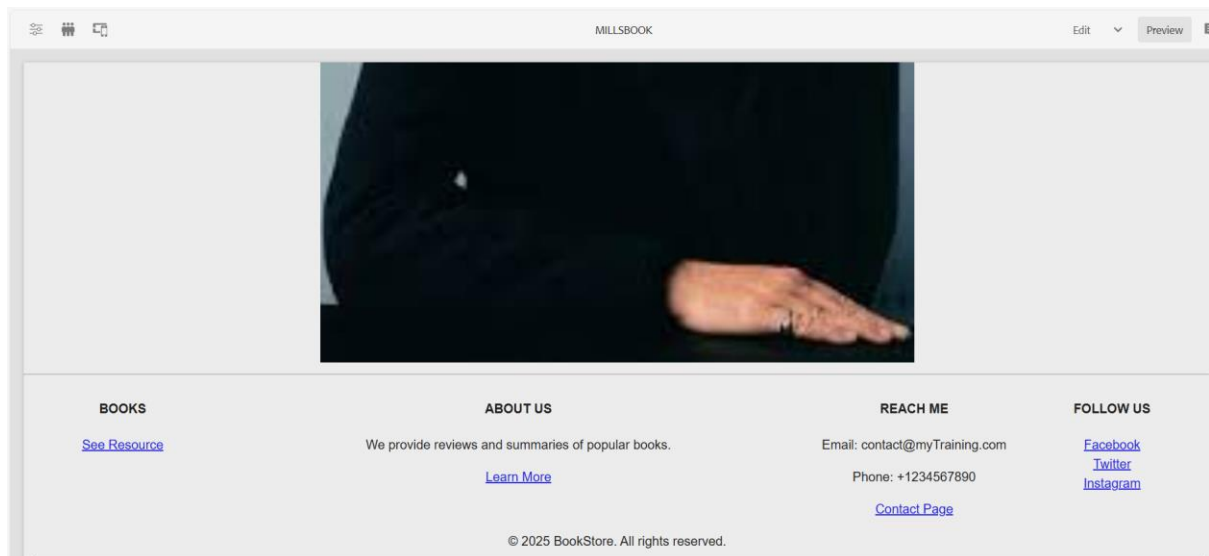

- logo.jpeg: 270 x 248 | 72 KB
- asset.jpg: 940 x 51 | 69.5 KB
